

How to exit the trade.

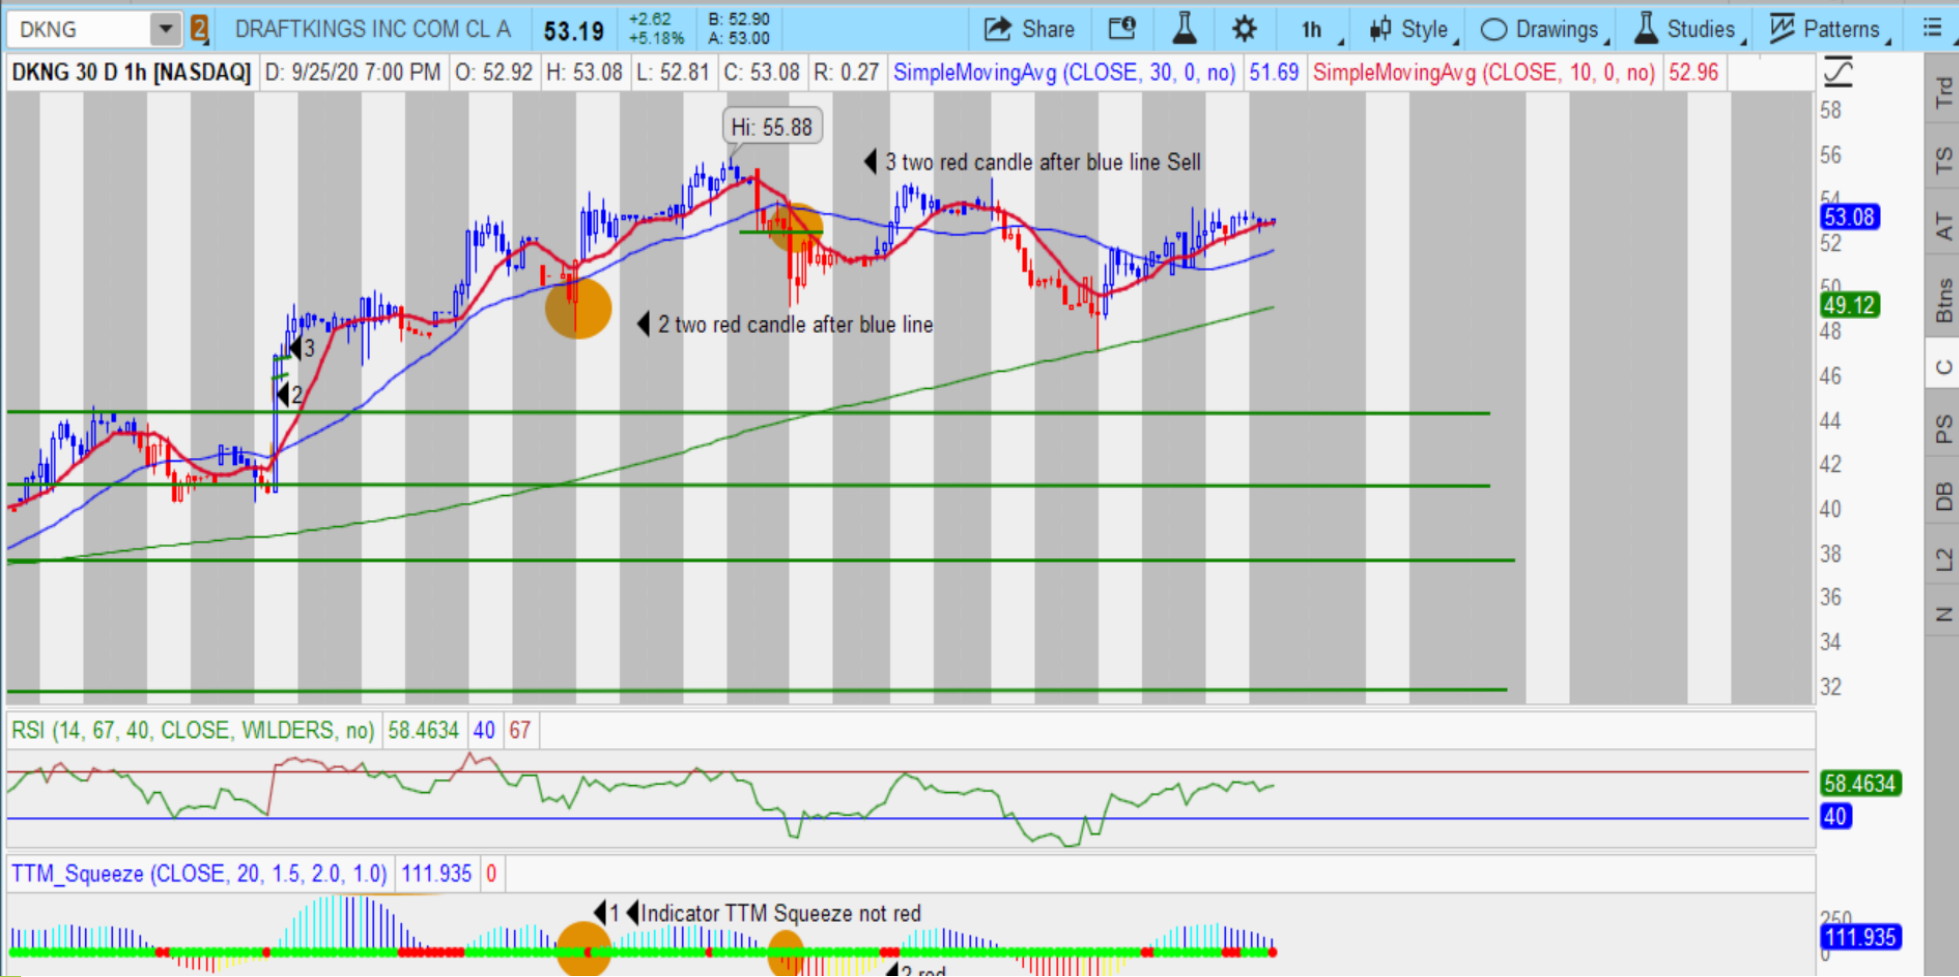

We use the hourly chart to exit the trade.

We use SMA 30 blue line and the SMA 10 red line.

You can use extended hours for less risk.

If you have long call options you can sell 50% if all two rules are followed and keep 50% or you can buy put options to protect your calls.

We use the hourly chart to exit the trade.

The following two rules must be followed:

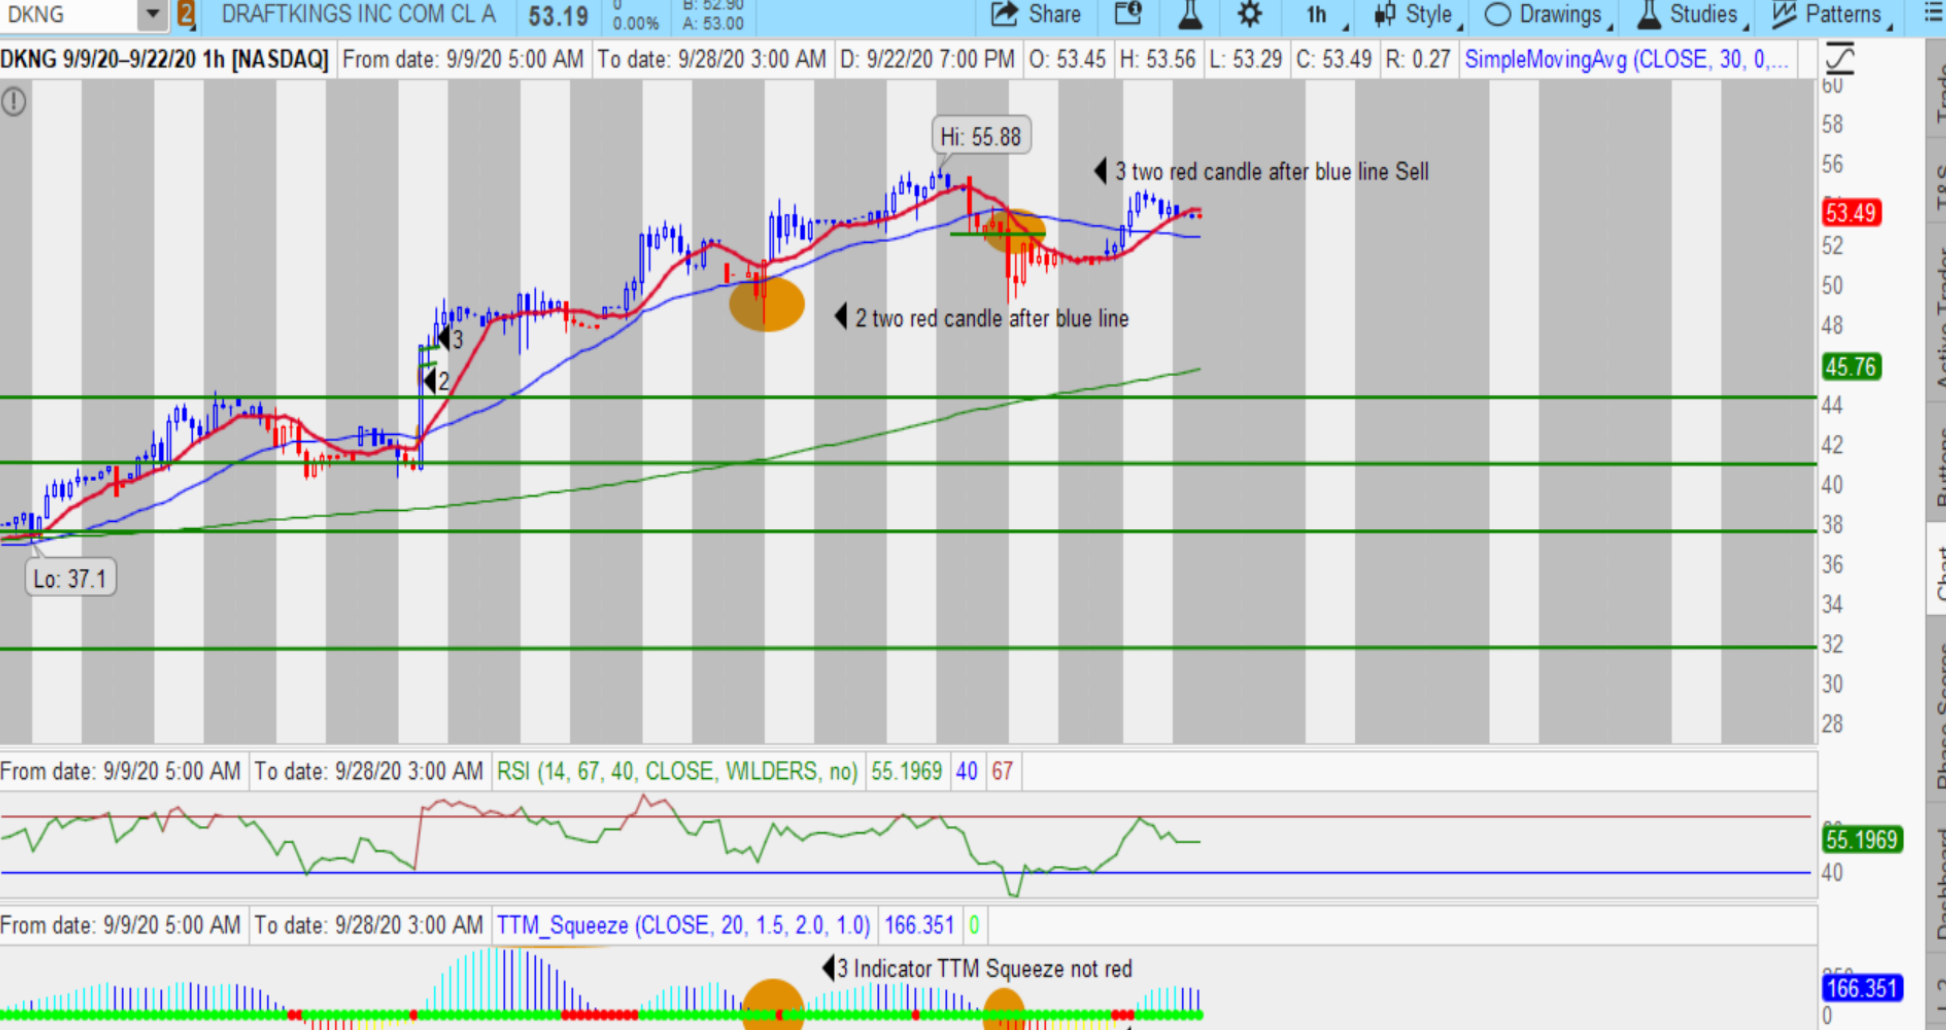

1. The stock crossed the blue line down with three red candles, each of which is lower than the previous one

2. TTM Squeeze indicator is red

The two rules are not met therefore we do not sell.

We see only 2 red candles and the TTM Squeeze indicator is not red.

We see 3 red candles after the blue line and the TTM Squeeze indicator is red. We are definitely selling.

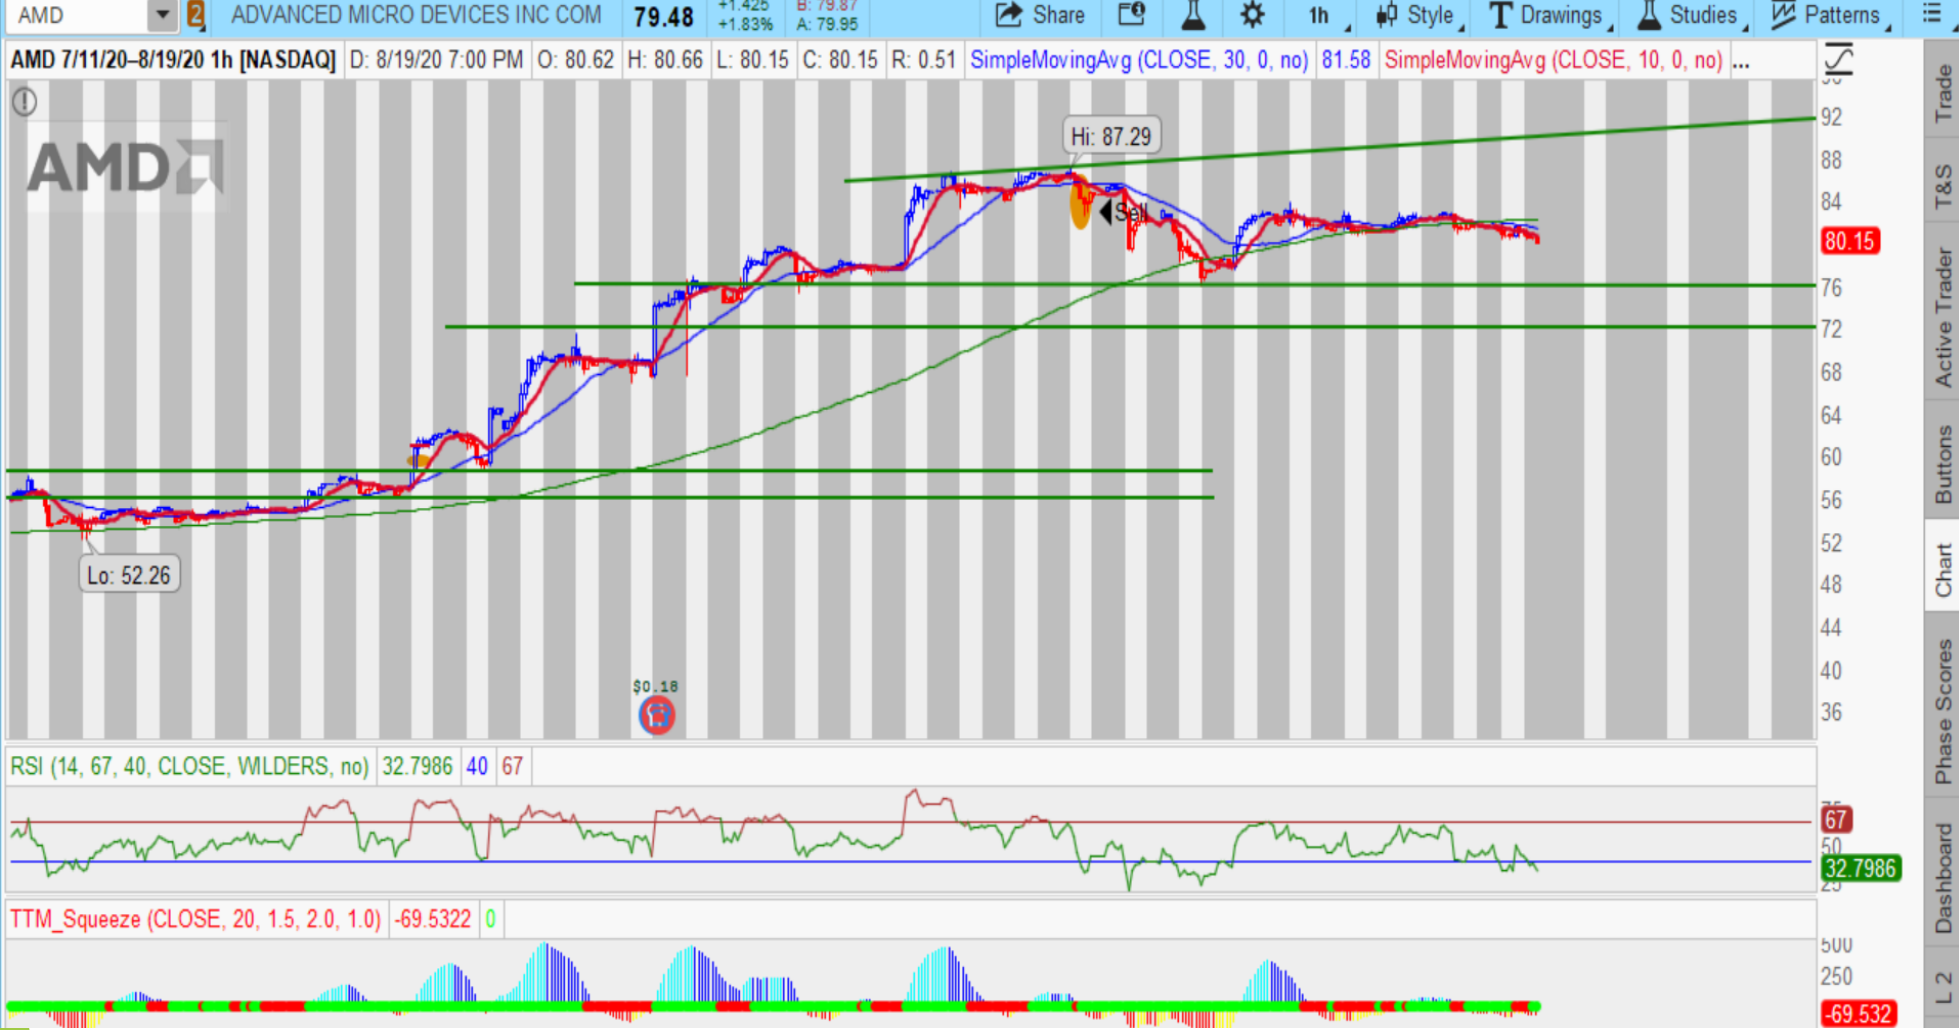

\$DKNG

For long-term investments, it's better to use Donchian channels. When the price intercepts a red line that is going down with 3 candles immediately sell. You can use different strategies hedging on your risk.

**The two rules are not met therefore we do not sell.
 We see only 2 red candles and the TTM Squeeze indicator is not red.**

We see 3 red candles after the blue line and the TTM Squeeze indicator is red. We are definitely selling.
